

WCAG 2.0 LEVEL A

	Checked By/ Date	Number	Description	Link
<input type="checkbox"/>		1.1.1 Non-text Content	All non-text content that is presented to the user has a text alternative that serves the equivalent purpose, except for the situations listed	https://www.w3.org/WAI/WCAG21/Understanding/non-text-content.html
<input type="checkbox"/>		1.2.1 Audio-only and Video-only (Prerecorded)	For prerecorded audio-only and prerecorded video-only media, the following are true, except when the audio or video is a media alternative for text and is clearly labeled as such: <ul style="list-style-type: none"> Prerecorded Audio-only: An alternative for time-based media is provided that presents equivalent information for prerecorded audio-only content. Prerecorded Video-only: Either an alternative for time-based media or an audio track is provided that presents equivalent information for prerecorded video-only content. 	https://www.w3.org/WAI/WCAG21/Understanding/audio-only-and-video-only-prerecorded.html
<input type="checkbox"/>		1.2.2 Captions (Prerecorded)	Captions are provided for all prerecorded audio content in synchronized media, except when the media is a media alternative for text and is clearly labeled as such.	https://www.w3.org/WAI/WCAG21/Understanding/captions-prerecorded.html
<input type="checkbox"/>		1.2.3 Audio Descriptions or Media Alternative (Prerecorded)	An alternative for time-based media or audio description of the prerecorded video content is provided for synchronized media, except when the media is a media alternative for text and is clearly labeled as such.	https://www.w3.org/WAI/WCAG21/Understanding/audio-description-or-media-alternative-prerecorded.html
<input type="checkbox"/>		1.3.1 Info and Relationships	Information, structure, and relationships conveyed through presentation can be programmatically determined or are available in text.	https://www.w3.org/WAI/WCAG21/Understanding/info-and-relationships.html
<input type="checkbox"/>		1.3.2 Meaningful Sequence	When the sequence in which content is presented affects its meaning, a correct reading sequence can be programmatically determined.	https://www.w3.org/WAI/WCAG21/Understanding/meaningful-sequence.html
<input type="checkbox"/>		1.3.3 Sensory Characteristics	Instructions provided for understanding and operating content do not rely solely on sensory characteristics of components such as shape, color, size, visual location, orientation, or sound.	https://www.w3.org/WAI/WCAG21/Understanding/sensory-characteristics.html
<input type="checkbox"/>		1.4.1 Use of Color	Color is not used as the only visual means of conveying information, indicating an action, prompting a response, or distinguishing a visual element.	https://www.w3.org/WAI/WCAG21/Understanding/use-of-color.html
<input type="checkbox"/>		1.4.2 Audio Control	If any audio on a Web page plays automatically for more than 3 seconds, either a mechanism is available to pause or stop the audio, or a mechanism is available to control audio volume independently from the overall system volume level. Note 1: Since any content that does not meet this success criterion can interfere with a user's ability to use the whole page, all content on the Web page (whether or not it is used to meet other success criteria) must meet this success criterion. See Conformance Requirement 5: Non-Interference.	https://www.w3.org/WAI/WCAG21/Understanding/audio-control.html
<input type="checkbox"/>		2.1.1 Keyboard	All functionality of the content is operable through a keyboard interface without requiring specific timings for individual keystrokes, except where the underlying function requires input that depends on the path of the user's movement and not just the endpoints. Note 1: This exception relates to the underlying function, not the input technique. For example, if using handwriting to enter text, the input technique (handwriting) requires path-dependent input but the underlying function (text input) does not. Note 2: This does not forbid and should not discourage providing mouse input or other input methods in addition to keyboard operation.	https://www.w3.org/WAI/WCAG21/Understanding/keyboard.html
<input type="checkbox"/>		2.1.2 No Keyboard Trap	If keyboard focus can be moved to a component of the page using a keyboard interface, then focus can be moved away from that component using only a keyboard interface, and, if it requires more than unmodified arrow or tab keys or other standard exit methods, the user is advised of the method for moving focus away. Note 1: Since any content that does not meet this success criterion can interfere with a user's ability to use the whole page, all content on the Web page (whether it is used to meet other success criteria or not) must meet this success criterion. See Conformance Requirement 5: Non-Interference.	https://www.w3.org/WAI/WCAG21/Understanding/no-keyboard-trap.html

<input type="checkbox"/>		2.2.1 Timing Adjustable	<p>For each time limit that is set by the content, at least one of the following is true: Hide full description</p> <ul style="list-style-type: none"> • Turn off: The user is allowed to turn off the time limit before encountering it; or • Adjust: The user is allowed to adjust the time limit before encountering it over a wide range that is at least ten times the length of the default setting; or • Extend: The user is warned before time expires and given at least 20 seconds to extend the time limit with a simple action (for example, "press the space bar"), and the user is allowed to extend the time limit at least ten times; or • Real-time Exception: The time limit is a required part of a real-time event (for example, an auction), and no alternative to the time limit is possible; or • Essential Exception: The time limit is essential and extending it would invalidate the activity; or • 20 Hour Exception: The time limit is longer than 20 hours. 	https://www.w3.org/WAI/WCAG21/Understanding/timing-adjustable.html
<input type="checkbox"/>		2.2.2 Pause, Stop, Hide	<p>For moving, blinking, scrolling, or auto-updating information, all of the following are true: Hide full description</p> <ul style="list-style-type: none"> • Moving, blinking, scrolling: For any moving, blinking or scrolling information that (1) starts automatically, (2) lasts more than five seconds, and (3) is presented in parallel with other content, there is a mechanism for the user to pause, stop, or hide it unless the movement, blinking, or scrolling is part of an activity where it is essential; and • Auto-updating: For any auto-updating information that (1) starts automatically and (2) is presented in parallel with other content, there is a mechanism for the user to pause, stop, or hide it or to control the frequency of the update unless the auto-updating is part of an activity where it is essential. <p>Note 1: For requirements related to flickering or flashing content, refer to Guideline 2.3.</p> <p>Note 2: Since any content that does not meet this success criterion can interfere with a user's ability to use the whole page, all content on the Web page (whether it is used to meet other success criteria or not) must meet this success criterion. See Conformance Requirement 5: Non-Interference.</p> <p>Note 3: Content that is updated periodically by software or that is streamed to the user agent is not required to preserve or present information that is generated or received between the initiation of the pause and resuming presentation, as this may not be technically possible, and in many situations could be misleading to do so.</p> <p>Note 4: An animation that occurs as part of a preload phase or similar situation can be considered essential if interaction cannot occur during that phase for all users and if not indicating progress could confuse users or cause them to think that content was frozen or broken.</p>	https://www.w3.org/WAI/WCAG21/Understanding/pause-stop-hide.html
<input type="checkbox"/>		2.3.1 Three Flashes or Below Threshold	<p>Web pages do not contain anything that flashes more than three times in any one second period, or the flash is below the general flash and red flash thresholds.</p> <p>Note 1: Since any content that does not meet this success criterion can interfere with a user's ability to use the whole page, all content on the Web page (whether it is used to meet other success criteria or not) must meet this success criterion. See Conformance Requirement 5: Non-Interference.</p>	https://www.w3.org/WAI/WCAG21/Understanding/three-flashes-or-below-threshold.html
<input type="checkbox"/>		2.4.1 Bypass Blocks	A mechanism is available to bypass blocks of content that are repeated on multiple Web pages.	https://www.w3.org/WAI/WCAG21/Understanding/bypass-blocks.html
<input type="checkbox"/>		2.4.2 Page Titled	Web pages have titles that describe topic or purpose.	https://www.w3.org/WAI/WCAG21/Understanding/page-titled.html

	Checked By/ Date	Number	Description	Link
<input type="checkbox"/>		2.4.3 Focus Order	If a Web page can be navigated sequentially and the navigation sequences affect meaning or operation, focusable components receive focus in an order that preserves meaning and operability.	https://www.w3.org/WAI/WCAG21/Understanding/focus-order.html
<input type="checkbox"/>		2.4.4 Link Purpose (In Context)	The purpose of each link can be determined from the link text alone or from the link text together with its programmatically determined link context, except where the purpose of the link would be ambiguous to users in general.	https://www.w3.org/WAI/WCAG21/Understanding/link-purpose-in-context.html
<input type="checkbox"/>		3.1.1 Language of Page	The default human language of each Web page can be programmatically determined.	https://www.w3.org/WAI/WCAG21/Understanding/language-of-page.html
<input type="checkbox"/>		3.2.1 On Focus	When any user interface component receives focus, it does not initiate a change of context.	https://www.w3.org/WAI/WCAG21/Understanding/on-focus.html
<input type="checkbox"/>		3.2.2 On Input	Changing the setting of any user interface component does not automatically cause a change of context unless the user has been advised of the behavior before using the component.	https://www.w3.org/WAI/WCAG21/Understanding/on-input.html
<input type="checkbox"/>		3.3.1 Error Identification	If an input error is automatically detected, the item that is in error is identified and the error is described to the user in text.	https://www.w3.org/WAI/WCAG21/Understanding/error-identification.html
<input type="checkbox"/>		3.3.2 Labels or Instructions	Labels or instructions are provided when content requires user input.	https://www.w3.org/WAI/WCAG21/Understanding/labels-or-instructions.html
<input type="checkbox"/>		4.1.1 Parsing	In content implemented using markup languages, elements have complete start and end tags, elements are nested according to their specifications, elements do not contain duplicate attributes, and any IDs are unique, except where the specifications allow these features. Note 1: Start and end tags that are missing a critical character in their formation, such as a closing angle bracket or a mismatched attribute value quotation mark are not complete.	https://www.w3.org/WAI/WCAG21/Understanding/parsing.html
<input type="checkbox"/>		4.1.2 Name, Role, Value	For all user interface components (including but not limited to: form elements, links and components generated by scripts), the name and role can be programmatically determined; states, properties, and values that can be set by the user can be programmatically set; and notification of changes to these items is available to user agents, including assistive technologies. Note 1: This success criterion is primarily for Web authors who develop or script their own user interface components. For example, standard HTML controls already meet this success criterion when used according to specification. Understanding 4.1.2 Show techniques and failures for 4.1.2	https://www.w3.org/WAI/WCAG21/Understanding/name-role-value.html
